Multi-Stage Dilation Balloon

Strength and control

Choose strength and control when dilating strictures with a wire guided or fixed wire multi-stage dilatation balloon from Micro-Tech. The Multi-Stage Pebax® Balloon provides three distinct sizes at set pressures and features little to no waisting. The clear material and balloon design supports visualization throughout the procedure.

KEY BENEFITS

■ CHOICE OF MATERIAL

The high quality Pebax material produces a balloon with the features and performance your providers demand. Accurate three-size radial expansion, rounded shoulders, clear visibility and strength with control.

■ VISIBILITY UNDER FLUOROSCOPY

All wire guided balloons feature two radiopaque markers at the balloon shoulder, allowing for accurate placement across the stricture. The dedicated inflation port permits the introduction of contrast to further enhance visibility if desired.

■ TAPERED TIP

The rounded tip aids in the smooth passage of the balloon across the stricture. The wire guided balloon is provided with a pre-loaded .035 guidewire that has a soft, flexible tip to assist in placement in tortuous or altered anatomy.
